

P.E. GO Making Connections for Students-

In this presentation, you will come away with activities and games that incorporate concepts from math, language arts, and health and fitness. The activities are designed for elementary students which are easy to use as openers, closers and fitness activities in your lessons. When students become the concepts, they begin to remember and understand them more clearly. By using PEGO (like LEGO) only moving, students can make connections to your curriculum as well as other curriculum areas.

Presenter: Marigay Schopp Schirle Elementary School Salem, OR.
